

SONARAY™ LED Lighting announces DLC Listing and NSF Certification for new Obi Light Bar Products

(Verona, Virginia – December 12, 2017) SONARAY™, a central Virginia-based manufacturer of industrial, horticulture, and maritime LED lighting fixtures today announced it has obtained DLC listing and NSF certification for its new Obi Light Bar product offering.

Noted for their extreme versatility, since they are available in 2-foot or 4-foot lengths, and can be bracketed for use from a single Light Bar up to five Light Bars per mounting, Obi brings enhanced lumen output of up to 150 lumens per watt, and a sleek new design with choices of either frosted or clear diffusers so they are as aesthetically appealing as they are durable.

Obi Light Bars are available in a variety of beam angles ranging from 30 degrees to 130 degrees for narrow and wide light distribution applications. The fixtures also carry an IP66 rating, indicative of their ability to be highly resistant to steam, fumes, water contact, spray, dust, and condensation. The fixtures have been tested to water spray pressure up to 3000 PSI.

Additionally, the luminaires have an impact rating of IK09, meaning they are well protected against external mechanical impact.

According to John Vidaurrazaga, SONARAY™ Product Manager, “Obi Light Bars are exciting and extremely flexible products. Common uses can range from offices and warehouses to food processing plants, natatoriums, and car washes. The new listings compliment the great features because now the fixtures may be eligible for utility company rebates and will also allow entities such as poultry and meat processing plants the opportunity to use these luminaires in their food processing environments.”

Robert Seward, National Sales Manager for SONARAY™ North America adds: “Obi Light Bars are extremely competitively priced and really provide customers unmatched flexibility and feature offerings. They have serial connection capability, come with standard dimming, and the new certifications mean a whole different category of customer can now benefit from these feature-rich products at very affordable pricing. Because of energy savings and potential rebates, return on initial investment can be very short with ongoing savings over the life of the luminaire.”

SONARAY™ has Americas headquarters in Central Virginia where product management, marketing, sales, technical support, lighting layout, warehousing, and assembly occur.

SONARAY™ is noted for producing high-efficacy, durable flood lighting, horticulture hydroponic systems and lighting, and a broad range of exterior and interior industrial lighting products. More information on the product offering and brand can be found at www.sonarayled.com.
